

# Fazor 1000 Plus

A high-quality addition to  
your daily welding routine

The Fazor 1000 Plus offers the best possible protection for your daily welding work. It is simple, robust and offers excellent quality, as well as a very good price/performance ratio. With a shade level range of 9–13, a wide range of possible applications can be covered.

In total darkness, the helmet switches into sleep mode to save energy and extend the battery's service life.

A specially developed UV/IR filter enables realistic color perception, bringing color into your daily welding routine.

You can set the shade level directly on the outside of the helmet. It can also be operated while wearing gloves.

The headband ensures stability and a long service life. You can adjust the distance to the helmet shell and the fit in just a few steps.
