

PROCESS AND PARAMETER OPTIMIZATION

OPTIMIZE
USE OF
RESOURCES

INCREASE PROFITS

/ By optimizing the welding speed, the production volume can be increased by up to 24%.

REDUCE COSTS

- / Reparation costs reduced by up to 60%
- / Production costs reduced by up to 22%
- / Gas costs reduced by up to 30%
- / Personnel costs reduced by up to 20%

REPEATABLE QUALITY

/ Optimizations can be transferred to other production sites.

***NOTE:** For new requirements, we will develop the optimal solution for you in the framework of the welding tests.*

	Scope of Services
Determine the right welding process	✓
Selection of the best characteristics for the application	✓
Use of a suitable shielding gas	✓
Defining corresponding filler metals	✓
Adjustment of wearing parts to the process and filler metal	✓
Optimization of welding parameters and speeds	✓
Adaptation of burner settings	✓
Error detection and correction in the welding process	✓
Advice and guidance for the system operator	✓
