# Allgemeines

## Sicherheit

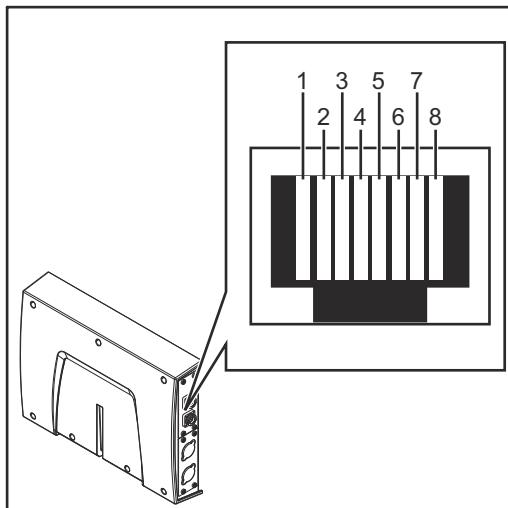

### WARNING!

#### Gefahr durch Fehlbedienung und fehlerhaft durchgeführte Arbeiten.

Schwere Personen- und Sachschäden können die Folge sein.

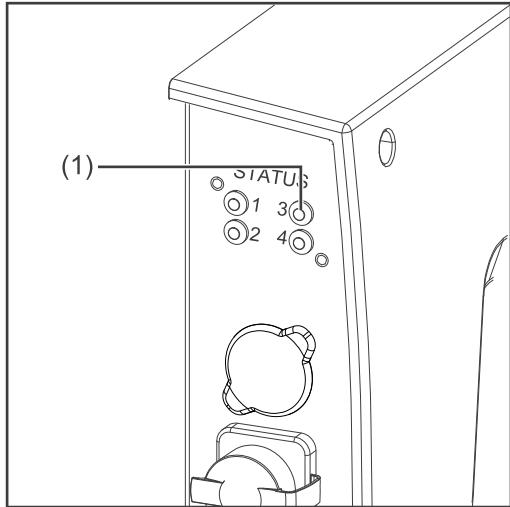

- Alle in diesem Dokument beschriebenen Arbeiten und Funktionen dürfen nur von technisch geschultem Fachpersonal ausgeführt werden.
- Dieses Dokument vollständig lesen und verstehen.
- Sämtliche Sicherheitsvorschriften und Benutzerdokumentationen dieses Gerätes und aller Systemkomponenten lesen und verstehen.

## Anschlüsse und Anzeigen

Pin-Belegung RJ 45 ProfiNet Anschluss

1	TX+
2	TX-
3	RX+
6	RX-
4,5,7, 8	Normalerweise nicht verwendet; um die Signalvollständigkeit sicherzustellen, sind diese Pins miteinander verbunden und enden über einen Filterkreis am Schutzleiter (PE).

**(1) LED RUN - Betrieb**  
Diese LED gibt den Status der CoE Kommunikation wieder. (CoE = CA-Nopen over EtherCAT)

**Aus:**

CoE Gerät im Status 'init' (oder keine Versorgungsspannung)

**Leuchtet grün:**

CoE Gerät im Status 'operational'

**Blinkt grün:**

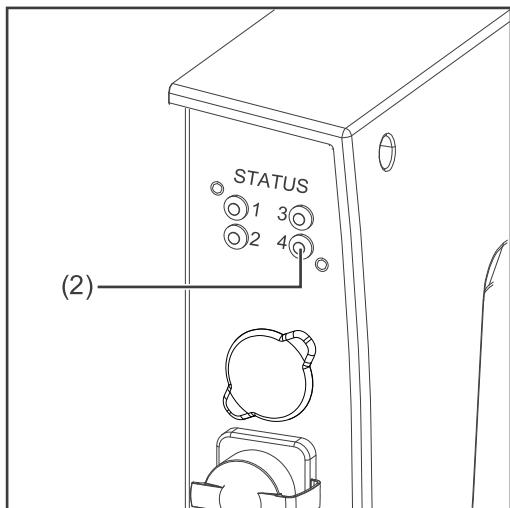

CoE Gerät im Status 'pre-operational'

**Blinkt grün (kurz):**

CoE Gerät im Status 'safe-operational'

**Leuchtet rot:**

Wenn die LEDs RUN und ERR leuchten, zeigt das ein schwerwiegendes Ereignis an, welches das Interface in einen Ausnahmezustand bringt. In diesem Fall den Servicedienst verständigen.

**(2) LED ERR - Fehler**

**Aus:**

keine Fehler (oder keine Versorgungsspannung)

**Blinkt rot:**

falsche Konfiguration  
Vom Master empfangener Statuswechsel ist nicht möglich wegen ungültiger Register- oder Objekteinstellungen

**Blinkt rot (doppelt):**

Application watchdog timeout  
Syn manager watchdog timeout

**Leuchtet rot:**

Application controller failure  
Anybus Modul in EXCEPTION

**Eigenschaften der Datenübertragung**

**Übertragungstechnik:**

EtherCAT

**Medium:**

Bei der Auswahl der Kabel, Stecker und Abschluss-Widerstände ist die IEC 61784-5-12 für die Planung und Installation von EtherCAT Systemen zu beachten.

Seitens Hersteller wurden die EMV-Tests mit einem original Beckhoff-Kabel (ZK1090-9191-xxxx) durchgeführt.

---

**Übertragungs-Geschwindigkeit:**

100 Mbit/s

**Busanschluss:**

RJ-45 Ethernet

**Application Layer:**

CANopen

---

**Konfigurationsparameter**

Bei einigen Robotersteuerungen kann es erforderlich sein die hier beschriebenen Konfigurationsparameter anzugeben, damit das Busmodul mit dem Roboter kommunizieren kann.

Parameter	Wert	Beschreibung
Vendor ID	0000 02C1 <sub>hex</sub> (705 <sub>dez</sub> )	Fronius International GmbH
Product Code	0001 0322 <sub>hex</sub> (66338 <sub>dez</sub> ) 0001 0321 <sub>hex</sub> (66337 <sub>dez</sub> )	Standard Image Economy Image
Device Name		Fronius-RI-FB-Pro-EtherCAT

---

**Vergabe der EtherCAT-Adresse**

Die EtherCAT-Adresse wird vom Master vergeben.

# Prozessdaten-Breite des Busmoduls einstellen

---

## Prozessdaten-Breite des Busmoduls einstellen

### IP-Adresse des verwendeten Schweißgerätes notieren:

- 1** Am Bedienpanel des Schweißgerätes „Voreinstellungen“ auswählen
- 2** Am Bedienpanel des Schweißgerätes „System“ auswählen
- 3** Am Bedienpanel des Schweißgerätes „Information“ auswählen
- 4** Angezeigte IP-Adresse notieren (Beispiel: 10.5.72.13)

### Website des Schweißgerätes im Internetbrowser aufrufen:

- 5** Computer mit dem Netzwerk des Schweißgerätes verbinden
- 6** IP-Adresse des Schweißgerätes in die Suchleiste des Internetbrowsers eingeben und bestätigen
- 7** Standard-Benutzernamen (admin) und Passwort (admin) eingeben
  - Website des Schweißgerätes wird angezeigt

### Prozessdaten-Breite des Busmoduls einstellen:

- 8** Auf der Website des Schweißgerätes den Reiter „RI FB PRO/i“ auswählen
- 9** Bei Punkt „Prozessdaten“ die gewünschte Prozessdaten-Konfiguration auswählen
- 10** „Speichern“ auswählen
  - Die Feldbus-Verbindung wird neu gestartet und die Konfiguration übernommen

# Ein- und Ausgangssignale

---

## Datentypen

Folgende Datentypen werden verwendet:

- **UINT16** (Unsigned Integer)  
Ganzzahl im Bereich von 0 bis 65535
- **SINT16** (Signed Integer)  
Ganzzahl im Bereich von -32768 bis 32767

## Umrechnungsbeispiele:

- für positiven Wert (SINT16)  
z.B. gewünschter Drahtvorschub x Faktor  
 $12.3 \text{ m/min} \times 100 = 1230_{\text{dez}} = 04CE_{\text{hex}}$
- für negativen Wert (SINT16)  
z.B. gewünschte Lichtbogen-Korrektur x Faktor  
 $-6.4 \times 10 = -64_{\text{dez}} = FFC0_{\text{hex}}$

---

## Verfügbarkeit der Eingangssignale

Die nachfolgend angeführten Eingangssignale sind ab Firmware V2.0.0 des RI FB PRO/i verfügbar.

---

## Eingangssignale (vom Roboter zum Schweißgerät)

Adresse				Signal	Aktivität / Datentyp	Bereich	Faktor	Prozess-Image

# General

## Safety

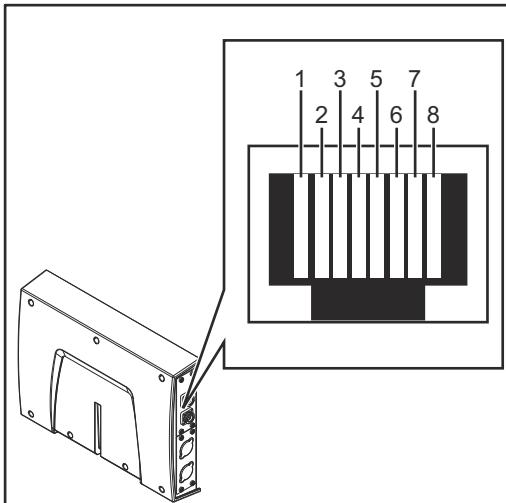

### WARNING!

#### Danger from incorrect operation and work that is not carried out properly.

This can result in serious personal injury and damage to property.

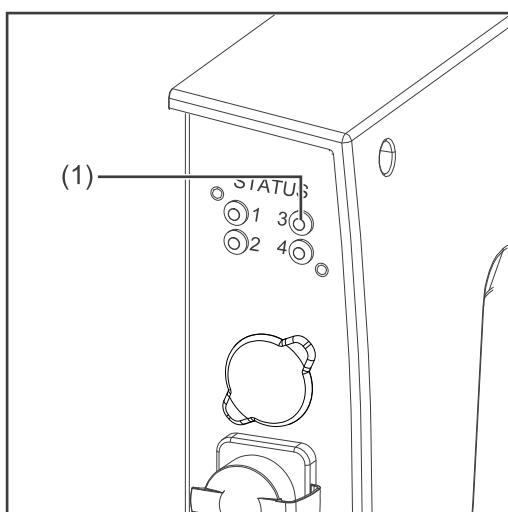

- All the work and functions described in this document must only be carried out by technically trained and qualified personnel.
- Read and understand this document in full.
- Read and understand all safety rules and user documentation for this equipment and all system components.

## Connections and Indicators

Pin assignment RJ45 ProfiNet connection

1	TX+
2	TX-
3	RX+
6	RX-
4,5,7, 8	Not normally used; to ensure signal completeness, these pins must be interconnected and, after passing through a filter circuit, must terminate at the ground conductor (PE).

**(1) RUN LED - operation**  
This LED indicates the status of the CoE communication. (CoE = CA-Nopen over EtherCAT)

#### Off:

CoE device in 'init' status (or no supply voltage)

#### Lights up green:

CoE device in 'operational' status

#### Flashes green:

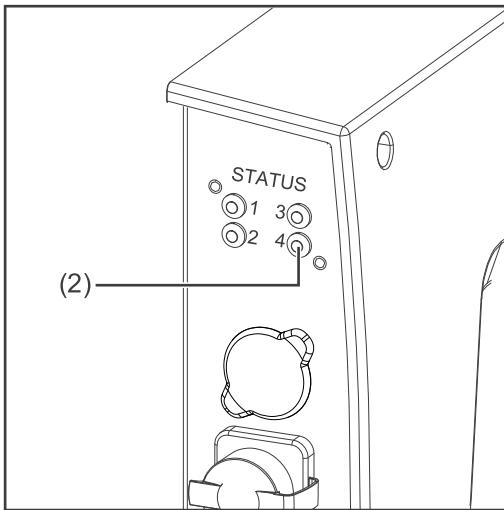

CoE device in 'pre-operational' status

#### Flashes green (briefly):

CoE device in 'safe-operational' status

#### Lights up red:

If the RUN LED and ERR LED light up red, this indicates a serious event which places the interface in an exception state. In this case, inform the service team.

### (2) ERR LED - error

#### Off:

No error (or no supply voltage)

#### Flashes red:

Incorrect configuration

The status change received from the master is not possible due to invalid register or object settings

#### Flashes red (twice):

Application watchdog timeout  
Syn manager watchdog timeout

#### Lights up red:

Application controller failure  
Anybus module in EXCEPTION

## Data Transfer Properties

### Transfer technology:

EtherCAT

### Medium:

When selecting the cable, plug, and terminating resistors, the IEC 61784-5-12 for the planning and installation of EtherCAT systems must be observed.

The EMC tests were carried out by the manufacturer with an original Beckhoff cable (ZK1090-9191-xxxx).

### Transmission speed:

100 Mbit/s

### Bus connection:

RJ45 Ethernet

### Application layer:

CANopen

## Configuration Parameters

In some robot control systems, it may be necessary to state the configuration parameters described here so that the bus module can communicate with the robot.

Parameter	Value	Description
Vendor ID	0000 02C1 <sub>hex</sub> (705 <sub>dec</sub> )	Fronius International GmbH
Product Code	0001 0322 <sub>hex</sub> (66338 <sub>dec</sub> )  0001 0321 <sub>hex</sub> (66337 <sub>dec</sub> )	Standard Image Economy Image
Device Name		Fronius-RI-FB-Pro-EtherCAT

## Assigning the EtherCAT Address

The EtherCAT address is assigned by the master.

# Set the Process Data Width of the Bus Module

---

## Setting the process data width of the bus module

### Note down the IP address of the welding machine used:

- 1** On the welding machine control panel, select "Defaults"
- 2** On the welding machine control panel, select "System"
- 3** On the welding machine control panel, select "Information"
- 4** Note down the displayed IP address (example: 10.5.72.13)

### Open website of the welding machine in the internet browser:

- 5** Connect the computer to the network of the welding machine
- 6** Enter the IP address of the welding machine in the search bar of the internet browser and confirm
- 7** Enter the standard user name (admin) and password (admin)
  - The website of the welding machine is displayed

### Set the process data width of the bus module:

- 8** On the welding machine website, select the "RI FB PRO/i" tab
- 9** Under "Process data", select the desired process data configuration
- 10** Select "Save"
  - The field bus connection is restarted and the configuration is applied

# Input and output signals

---

## Data types

The following data types are used:

- **UINT16** (Unsigned Integer)  
Whole number in the range from 0 to 65535
- **SINT16** (Signed Integer)  
Whole number in the range from -32768 to 32767

## Conversion examples:

- for a positive value (SINT16)  
e.g. desired wire speed x factor  
 $12.3 \text{ m/min} \times 100 = 1230_{\text{dec}} = 04CE_{\text{hex}}$
- for a negative value (SINT16)  
e.g. arc correction x factor  
 $-6.4 \times 10 = -64_{\text{dec}} = FFC0_{\text{hex}}$

---

## Availability of input signals

The input signals listed below are available from firmware V2.0.0 of the RI FB PRO/i onwards.

---

## Input signals (from robot to welding machine)

Address				Signal	Activity / data type	Range	Factor	Process image	
Relative		Absolute						Standard	Economy
WORD	BYTE	BIT	BIT
